

Smart Monitoring and Secure Peace of Mind.

BioMetric Tracker  **24/7**

What Is Vital Watch

Vital Health Watch is a connected heart health monitoring system designed to support informed decision-making across patients, caregivers, and healthcare providers. Through a wearable device and secure mobile application, the system organizes health information collected during daily life into clear, structured insights that strengthen medical conversations and support coordinated care.

The brand serves adults managing heart-related conditions, individuals who benefit from shared care support, and families seeking reliable oversight without constant supervision. Vital Health Watch is built to balance independence with accessibility, allowing patients to remain in control while enabling trusted caregivers and clinicians to access information when appropriate.

At its core, the brand prioritizes clarity, continuity, and secure information sharing. Role-based access ensures that patients, caregivers, and emergency contacts receive the appropriate level of information, while privacy protections safeguard sensitive health data. Multi-day battery performance and passive monitoring reinforce the system's reliability in real-world use.

Visually, Vital Health Watch communicates trust through a restrained medical color palette of soft blues, slate tones, and neutral backgrounds. Clean typography, structured layouts, and intuitive interface design reflect the brand's emphasis on readability, accessibility, and professional credibility.

Rather than focusing on isolated readings, Vital Health Watch positions itself as a long-term health companion — supporting stronger appointments, organized medication discussions, and coordinated care through accessible health education and thoughtfully designed technology.

Full Color Logo:

Grayscale Logo:

One-Color Logo:

Reverse / White Logo:

When developing the Vital Health Watch logo, I focused on creating something that feels trustworthy and medically grounded without being cold or overly clinical. I kept the typography clean and structured to communicate stability and clarity, especially since the target audience includes adults managing heart conditions. I also incorporated a subtle heartbeat-inspired element to visually connect the brand to continuous monitoring, but in a controlled way that doesn't feel alarming. The blue color palette was intentional, it reinforces safety, professionalism, and calmness. Overall, the logo reflects a balance between medical credibility and approachability, which aligns with the brand's goal of supporting patients, caregivers, and healthcare providers through clear, accessible health information.

Our Service

Vital Health Watch is built for people who want to stay independent while knowing support is there when needed. The system reduces guesswork by quietly organizing health information over time, helping users feel confident without constant attention or worry.

- Continuous heart rhythm monitoring
- Passive, all-day and overnight tracking
- Pattern recognition with smart alerts
- Caregiver visibility when needed

About Us

Vital Health Watch is designed to help adults stay informed about their heart health without constant checking or manual tracking. Our system quietly monitors in the background and only notifies you when meaningful patterns emerge, so you can live confidently and independently.

Monitoring in the Background

Vital Health Watch works automatically throughout the day, alerting you only when attention may be needed.

Data Your Doctor Can Actually Use

Health data is securely stored and organized over time, making it easier to share clear summaries with doctors during appointments.

No Manual Logging Required

Health data is tracked and organized automatically in the background..

Best Vital Health Watch

Professional Medical Grade Vital Health App

Clear, reliable heart health insights supported by modern monitoring technology.

As you can see, I kept the cohesive blue color palette consistent throughout the layout to create a warm but technical feel. The soft gradients and clean contrast help the design feel medical and trustworthy, while still approachable for adults who may not be comfortable with overly complex health technology. I wanted the visual tone to feel calm and reassuring rather than intense or alarm-based.

When designing this brochure, I focused on highlighting the key points a patient would want to know if they saw this in a doctor's office. Instead of overwhelming them with technical specifications, I emphasized clarity, what the system does, how it benefits their daily life, how it supports doctor visits, and why it's different from standard fitness wearables. The messaging is structured around independence, background monitoring, and meaningful alerts, because those were major themes in the creative brief.

I also paid attention to hierarchy and spacing. Larger headings guide the reader's eye, supporting phrases like "Monitoring in the Background" and "Data Your Doctor Can Actually Use" so patients can quickly understand the value without reading every word. The product imagery reinforces credibility, while the structured layout keeps everything digestible and easy to scan.

Overall, this piece was designed to feel cohesive, professional, and informative, something that could realistically sit in a medical setting while still being visually engaging and clear to the target audience.

Why Choose us

While many wearables are designed for fitness and daily activity, Vital Health Watch is built for continuous health monitoring. By tracking trends over time and minimizing false alarms, the system provides clearer insight into changes that matter—without requiring constant checking or interaction.

01 Supports Informed Conversations

Helps users arrive at medical appointments with clearer context.

02 Designed for Real Life

Comfortable, discreet, and built to be worn consistently, without constant interaction, charging, or checking.

03 Purpose-Built for Health, Not Fitness

Designed from the ground up for long-term health awareness rather than workout metrics or lifestyle gamification.

Our Mission

Vital Health Watch is designed for people who want meaningful health awareness without constant checking or complicated routines. By monitoring quietly in the background, the system helps identify important changes early—supporting independence while keeping a safety net in place.

The Vital Health watch offers a convenient, everyday option for tracking heart activity and general wellness. Worn on the wrist, it provides quick insights and easy access throughout the day, making it well-suited for users who prefer a familiar, lightweight wearable for daily awareness.

Designed for users who want the most reliable heart rhythm data, the Vital Health chest strap sits closer to the heart to reduce interference from movement and positioning. This placement allows for steadier signal capture throughout daily activity, rest, and sleep, making it ideal for continuous monitoring and long-term trend tracking.

What We Offer +

- ✓ Chest strap and armband wear options
- ✓ Secure smartphone app (iOS & Android)
- ✓ Automatic data storage and trend tracking
- ✓ Easy sharing for doctor visits and caregivers

Prices & Coverage

- Retail Price: \$179-\$249 (varies by configuration)
- HSA/FSA eligible
- Insurance coverage may apply depending on provider

[GO!](#)

When designing the Vital Health Watch mobile interface, I relied heavily on the creative brief and my research around older adult usability. A major takeaway from my research was that many health apps are overly complicated, cluttered, and difficult to navigate, especially for users ages 45–65 and caregivers who may not be highly tech-savvy. Because of that, my primary goal was to create something simple, accessible, and immediately understandable.

I structured the interface around clarity and hierarchy. The most important information, like current heart rate or alert status, is placed prominently and centered, so users don't have to search for critical data. I avoided overwhelming dashboards filled with excessive charts or medical jargon. Instead, I focused on clean sections, large typography, clear icons, and high-contrast buttons that guide the user naturally through the experience.

The creative brief emphasized two interface modes: Individual and Caregiver. I made that separation clear from the very beginning of the app flow. This ensures that each user sees information appropriate to their role, reducing confusion and unnecessary detail. For example, the patient view is simplified and calm, while the caregiver view provides more detailed trend access and alert history.

I also designed the calendar, trend visuals, and emergency button intentionally. The calendar highlights specific days with alerts so patterns are easy to spot, while the emergency option is accessible but not visually alarming. The navigation bar uses recognizable icons to reduce cognitive load and make switching between sections intuitive.

Overall, the interface reflects the brand's core values from the creative brief, clarity, security, structured information, and coordinated care. Every design decision was guided by accessibility, long-term usability, and the goal of making complex health data feel manageable and understandable.

Monitoring trends matters more than reacting to crises.

Vital Chest Strap

- Medical-grade heart monitoring
- Helps family caregivers stay informed
- Easy to share trends with doctors

On the first post I created a bold, scroll-stopping headline: "Monitoring trends matters more than reacting to crises." The red typography grabs attention while staying true to the brand's heartbeat visual style. Instead of leaning into fear, I focused on proactive care and long-term awareness, aligning with the brief's emphasis on meaningful pattern recognition over panic-driven alerts.

The placement was intentional. This campaign would resonate on platforms like Facebook and Nextdoor, where many adults ages 45-65 and caregivers are active in community spaces. The tone feels informative rather than promotional, more like a helpful recommendation someone would share in a neighborhood group than a flashy ad.

The secondary post, featuring the alternate wearable option highlights flexibility and accessibility. It reassures viewers that both devices operate within the same secure system, making the decision feel simple instead of overwhelming. Overall, the campaign centers on clarity, reassurance, and credibility, meeting the audience where they are while staying aligned with the full Vital Health Watch brand system.

For the social campaign, I kept the cohesive blue palette and soft gradients used across the brand to maintain visual consistency. Matching the brochure, packaging, and app design strengthens recognition and trust across platforms. The subtle waveform graphics and medical-inspired tones carry that warm yet technical feel, which is essential when communicating health-related information.

OR Option 2 If you prefer:

Vital Watch

- Comfortable for everyday wear
- 5-7 day battery life for uninterrupted tracking
- Water-resistant for real-life use
- Supports health data for diabetic users
- Easy sharing with family and doctors

Either option works identically, using the same app and data.

In the third slide, I focused on showing just how simple the app experience is. Instead of a data-heavy dashboard, I broke the core features into clean, icon-based categories, logs, activity tracking, medication alerts, caregiver communication, and emergency response. It delivers a quick, clear overview without overwhelming the viewer, highlighting capability in a way that feels manageable.

I paired that breakdown with a real-life lifestyle image of an older adult wearing the device. It reinforces that the technology doesn't disrupt daily life, it supports it. The design balances function with a human moment, showing both how the system works and how naturally it fits into everyday routines.

By combining an at-a-glance feature summary with real-world imagery, the message is immediate: the app is easy to use, and the device is built for real life. This helps reduce intimidation around health tech while still maintaining a professional, medical-grade feel.

Retail Price:
\$179-\$249
 (Varies by device option: chest strap or armband, bundled accessories, and care features)

In the last peice, I intentionally combined the product, pricing, and contact information into one clear, organized layout to create immediate clarity. The headline, "Live Fully. Stay Aware." shifts the focus from clinical monitoring to lifestyle support, positioning the device as something that fits naturally into everyday routines. By placing the retail price range and coverage details directly on the graphic, viewers don't have to search for cost information, one of their biggest questions is answered upfront. That transparency reduces friction, builds trust, and allows them to process the rest of the message with confidence.

Live Fully. Stay Aware.

- Technology that adapts to your routine
- Designed to support daily independence
- Part of a connected care experience
- Encourages proactive health decisions
- Fits seamlessly into real life!

1800-818-6767

VitalHealth@email.com

www.VitalWatch.com

The layout balances emotional appeal with practical details, guiding the viewer smoothly through the information without overwhelm. Overall, the design moves beyond technical explanation and centers on reassurance, communicating that Vital Watch supports independence and proactive health quietly in th background. I chose this approach to give viewers a concise, at-a-glance summary of exactly what they'd want to know before deciding to explore further.

CareGiver SetUp Guide

Supporting someone's health, without
constant monitoring.

Beginners Overview:  24/7

Getting Started

Need Help Getting Started?

- Download the Vital Health Watch app
- Create or sign in to your caregiver account
- Add the person you're supporting
- Choose how you want to receive updates

Feature List

- **Current Status**
 - See how the person is doing right now.
- **Alert History**
 - Review past alerts and when they happened.
- **Health Trends**
 - See changes over time, not just one reading.
- **Detailed Insights**
 - View more information when you need it.
- **Multiple Profiles**
 - Monitor more than one family member in one app.
- **Direct Communication**
 - Stay connected with the person you're supporting.
- **Secure Access**
 - Health data is safely stored and available anytime.

Our Services

Supporting Care WithOut Taking Control

This setup guide is designed for caregivers supporting someone who wears VitalWatch. It explains how to connect the app, share health data, and understand caregiver-specific views, so support can be provided without interrupting daily independence.

1

CareGiver DashBoard:

The caregiver dashboard shows the current status of the monitored person, alert history, and health trends over time. This view provides more detail than the wearer's app and is designed for review, not constant checking.

2

Data Sharing & Access:

Health data syncs securely to the cloud, allowing caregivers to view information remotely. Access can be adjusted at any time, and the wearer does not need to take action for updates to appear.

3

Review Before Responding:

After viewing the dashboard, caregivers are encouraged to review recent trends and alert history before taking action. This helps determine whether a change is temporary or part of a developing pattern.

Designed to support informed care and shared decision-making,
alongside guidance from healthcare professionals.

For the Caregiver Setup Guide bifold, I focused on clarity, structure, and consistency with the rest of the Vital Health Watch brand system. The right side functions as the front and back cover, while the left side opens into the interior content. I maintained the same cohesive blue palette, soft waveform graphics, and clean typography used across the brochure, packaging, and app interface to ensure the entire system feels unified and professionally developed.

On the inside panel, I prioritized the key information a caregiver actually needs, not excessive technical details. The layout walks them through getting started, understanding core features like current status, alert history, and trend tracking, and knowing how data sharing works. The goal was to reduce intimidation and make the setup process feel manageable. Since many caregivers may not be highly technical, I structured the information in short, digestible sections with clear headings and simple language.

The three-step structure on the interior right panel reinforces this simplicity: Caregiver Dashboard, Data Sharing & Access, and Review Before Responding. These sections reflect the creative brief's emphasis on meaningful alerts rather than constant monitoring. It shows caregivers how to stay informed without feeling like they need to supervise continuously. Visually, I kept hierarchy strong and navigation intuitive. Larger headers draw attention, numbered steps guide flow, and spacing prevents visual clutter. The "Beginner's Overview 24/7" element on the cover reinforces reliability and ongoing support without feeling overwhelming.

Overall, this bifold was designed to empower caregivers, giving them structured, easy-to-follow information while maintaining the medical-grade credibility and cohesive identity established throughout the entire Vital Health Watch system.

The Complete Patient Education Guide

Health Watch:

24/7

Getting Started

What Vital Health Helps You Understand

Getting started with Vital Health Watch means learning how to understand your heart health in a clear, supportive way. This guide is designed to help you recognize what common health signals — like heart rate and blood pressure — mean in everyday life, without medical jargon or technical complexity.

You'll learn how daily habits such as movement, rest, and stress can influence your heart over time, and how to use this information to feel more confident about your wellness. Vital Health Watch turns health data into understandable insight, so you can stay informed without feeling overwhelmed.

This guide is meant to be used at your own pace and revisited whenever needed, serving as a long-term reference that supports calm, informed health decisions.

In This Guide, You'll Learn How To:

- Learn how your heart data is tracked over time to reveal meaningful trends
- Understand why Vital Health Watch alerts only for sustained or concerning patterns
- Feel more prepared when sharing health information with a medical professional

Scan to Access the Vital Health Watch App:

Our Services

Vital Health analyzes heart health information continuously and in context. Rather than focusing on individual readings, the system evaluates how measurements change over time and under normal daily conditions. The sections below explain how this approach helps identify meaningful health patterns, determine when alerts are appropriate, and support informed medical decision-making.

How Vital Health Interprets Health Data

1

From Readings to Patterns

Vital Health Watch evaluates heart data across hours, days, and weeks rather than relying on isolated measurements. This approach allows the system to distinguish between short-term fluctuations and changes that may indicate a developing health concern.

**2**

When Alerts Are Generated

Vital Health Watch is designed to notify users only when sustained or clinically relevant patterns are detected, such as prolonged irregular heart rhythms or consistently elevated blood pressure across multiple days.

**3**

How Information Is Shared When Needed

Health data collected by Vital Health Watch can be summarized into trend reports for caregivers or healthcare providers. These reports reflect real-world conditions and longer timeframes, supporting more informed clinical discussions and care decisions.

Key Takeaways:

Once health information is reviewed, Vital Health Watch can summarize longer-term trends to support medical appointments. Instead of relying on a single office reading, patients can share information that reflects daily life over several weeks, helping doctors make more informed care decisions.

Strengthening Appointments Through Accessible Health Education

Doctor Integration & Appointment Support

Vital Health works with your existing healthcare providers to support informed medical care. Health information collected by the wearable band is organized through the Vital Health app and can be reviewed during medical appointments.

Instead of relying on a single reading taken in the office, doctors can review health information collected over longer periods of time, such as 30–90 day trends. This helps providers see patterns that reflect daily life rather than short-term changes caused by stress, activity, or environment.

Health summaries can be shared in medical-standard formats, allowing doctors to better evaluate heart rhythm, heart rate, and blood pressure trends and make care decisions based on consistent data.

Medication Review & Treatment Adjustment

Many heart medications are prescribed to manage heart rhythm, blood pressure, or heart rate. Vital Health helps support medication review by showing how the body responds over time. By comparing health patterns before and after medication use, healthcare providers can:

- Evaluate whether a medication is effective
- Identify readings that remain consistently high or low

Recognize when medication adjustments may be needed

This allows medication decisions to be based on real-world information rather than occasional readings or patient memory alone.

Patients should always take medications as prescribed and consult their healthcare provider before making any changes.

Clear Escalation When Extra Support Is Needed

Not all health changes require immediate action, but some do. When concerning patterns reach a level that may require outside support, Vital Health Watch can escalate notifications beyond the patient.

For more serious or sustained changes, the system can notify a designated emergency contact, providing an added layer of protection without constant supervision.

Designed for Real-World Use

whether you picked the Vital Watch or the Vital Chest strap, the physical design of the Vital Health wearable supports are made to be consistent and long-term use. With a Lightweight materials, discreet placement under clothing, and water-resistant construction allowing the device to be worn comfortably during normal daily activities, day or night.

Consistent wear is important for accurate monitoring and helps ensure health information reflects real-world conditions rather than occasional use.

Reliable Monitoring With Built-In Privacy

Vital Health is designed to continuously collect and store health data, even when a phone is not nearby or internet access is unavailable. All information is securely saved on the device and automatically synced once a connection is restored, ensuring that no critical data is lost during travel, daily routines, or unexpected interruptions.

Patient privacy and data security remain a top priority. All health information is encrypted and protected within the app, and access is granted only to individuals the patient has explicitly authorized, such as a doctor, caregiver, or emergency contact. No data can be viewed without permission, and access levels are limited strictly to what is necessary for care. This approach safeguards sensitive information while ensuring that the right people can provide timely support when it matters most.

Including a Caregiver in Your Care

This Page Help patients understand when and why a caregiver may be involved, and how that support fits into their care — without removing independence.

When Caregiver Support Can Be Helpful

Some patients choose to involve a caregiver as part of their health management. This may include an adult child, spouse, or trusted family member. Caregiver involvement can be especially helpful for individuals managing chronic conditions, recovery periods, or changes in health over time.

Vital Health allows caregivers to stay informed without requiring constant check-ins or daily supervision.

How Caregivers Support Patients Using Vital Health Watch

Through secure access, caregivers can:

- View current health status when permitted
- Review alert history and long-term trends

Better understand changes that may require attention

This shared view helps caregivers support patients calmly and appropriately, without relying on guesswork or emergency-only communication.

Maintaining Independence

Including a caregiver does not mean giving up control. Patients decide if and when caregiver access is needed and can adjust access settings at any time.

Vital Health is designed to support independence first, with caregiver involvement added only when it benefits care and safety.

How Caregivers Use Health Information to Support Care

Explain what caregivers see and do, and how that supports safer, more coordinated care — without teaching app setup.

Understanding the Caregiver Dashboard

From the main caregiver screen, caregivers can see the patient's current heart rate displayed clearly at the center of the screen. This immediate view allows caregivers to check status quickly without searching through data or interpreting charts.

Understanding Health Trends and Alert Timing

Because the Vital Health wearables are designed to last up to 5–7 days on a single charge, caregivers can rely on consistent, uninterrupted monitoring without frequent charging or device management. This extended battery life helps ensure health information is collected continuously during normal daily life.

Caregivers can view trends across days and months rather than isolated readings, allowing them to understand whether changes are stable, improving, or becoming more concerning over time. Seeing trends reduces unnecessary worry and supports thoughtful decisions about when to reach out, schedule appointments, or simply continue monitoring.

Coordinated Care for Families

For caregivers supporting more than one family member, Vital Health allows multiple individuals to be monitored from a single app, creating a centralized view of care. Shared access to the same health information helps caregivers communicate more clearly with patients and healthcare providers, reducing misunderstandings and ensuring concerns are addressed accurately without juggling separate systems or devices.

We hope this guide helps you feel informed and supported as you use Vital Health. Keep it nearby, revisit it as needed, and continue your day knowing your health is being thoughtfully supported.

1800-818-6767

VitalHealth@email.com

www.VitalWatch.com

Multi-Page Layout OverView:

For the 8-page Patient Education Guide, I focused on consistency, clarity, and role-based communication. I kept the visuals, color palette, waveform graphics, typography, and layout, really close to the Caregiver Setup Guide so everything feels connected. If someone gets both guides in the box, it immediately reads as part of the same system.

I designed it with the patient first. The opening pages break down how their data is interpreted, privacy protections, and system communication, all explained in everyday language instead of technical jargon. I wanted patients to understand things like data safety, sharing with permission, trend tracking for doctor visits, and alerts that only pop up for meaningful patterns.

As the guide moves on, it introduces caregivers, but always from the patient's perspective first. This keeps the focus on independence while explaining how support works. I avoided repeating technical details from other materials, focusing instead on context, education, and helping patients have stronger medical conversations.

Visually, I used clear hierarchy, consistent spacing, and digestible content blocks so the guide feels organized but approachable. Each page builds on the last, moving from understanding health data to doctor integration to caregiver collaboration.

Overall, the guide is meant to feel supportive, clear, and empowering, professional but human, turning complex health tech into something real people can actually understand and use.

A Cohesive Print Experience for Patients and Caregivers

(tuck)

Getting Started

Medical-Grade
Heart Monitoring Watch & Chest Strap

It provides clear, reliable data to support heart health awareness and long-term wellness, designed to track heart rhythm and activity throughout the day. Vital Health is a wearable chest-strap heart monitor as well as a Vital Health Watch depending on your preference through the day.

Key Metrics Tracked

- Heart Rate
- ECG Readings
- Activity & Rest Patterns
- Irregular Rhythm Alerts

HOW VITAL HEALTH SUPPORTS CARE

Vital Health Watch is intended for use as part of everyday life, providing structured health information that can be reviewed over time rather than relied on in moments of urgency. The system is designed to support awareness and continuity by working alongside existing routines and medical guidance. Use of this product should always follow the included instructions and be combined with professional medical judgment when health concerns arise.

Vital Health™
Model: VH-W01

Compatible with iOS® and Android™ devices
Rechargeable battery designed for multi-day use

This product supports health monitoring and does not replace professional medical care.

Manufactured by:
Vital Health, Inc.
Charlotte, North Carolina, USA

7 1234 03782143 3482

Continuous cardiovascular monitoring designed for daily health awareness

Who This Is Designed For

Vital Health Watch is designed for adults managing heart health who benefit from continuous monitoring, clearer medical conversations, and shared care support. The system can be used independently or with a caregiver, depending on individual needs.

What's Included

- Vital Health Watch
- Vital Chest Strap
- Complete Patient Education Guide
- Caregiver Setup Guide
- Charging Cable

Information is collected automatically throughout the day.

For the final piece — the packaging design — I treated it as the physical summary of the entire Vital Health Watch system. Everything from the app, patient guide, caregiver guide, and campaign comes together here in one cohesive, medical-grade presentation.

The box itself, a sturdy $7.5 \times 5.5 \times 2.25$ rigid format, reinforces durability and credibility that'll fit All the needed accessories such as Vital Watch, Vital Chest Strap, the charger, and both Caregiver SetUp Guide and the Complete Patient Education Guide. The front stays minimal and professional, letting the logo and medical-grade positioning lead. The consistent blue gradients and waveform graphics tie directly back to all other deliverables, so the moment someone opens the box, the experience feels unified.

On the back, I focused on structured educational messaging rather than promotional copy. The "HOW VITAL HEALTH SUPPORTS CARE" section explains the system's purpose in a calm, clinical tone. Below that, the regulatory block includes model number (VH-W01), compatibility (iOS® and Android™), battery info, and disclaimers, all clearly separated from marketing content, following real medical packaging standards.

The side panels add clarity and orientation. "Who This Is Designed For" defines the target audience, adults managing heart health who may benefit from shared care, while "What's Included" lists the Vital Health Watch, chest strap, guides, and charging cable. This sets expectations and keeps everything transparent before the box is even opened.

Overall, the packaging was designed to feel structured, trustworthy, and aligned with professional medical standards. It visually connects every piece of the system, reinforcing clarity, accessibility, coordinated care, and credibility. The goal was never consumer fitness packaging, it's a thoughtful, healthcare-focused presentation that reflects the full Vital Health Watch experience.
